

CURRICULUM VITAE

Name: Graham Alexander McIntyre
Nationality: British
Status: Single
E-mail: mcintyre.graham@gmail.com
Full Clean Driving Licence
Highest Qualification: Master of Research - Computer Science
(Graphics Research) with distinction
Portfolio: <https://mcintyregithub.io/>

Home Address

West Bridgford, Nottingham
NG2 5JN

Before Windows PCs were mainstream, I owned a copy of a book containing BASIC code listings for games on the Sinclair ZX81. As a teenager I taught myself how to run and modify these programs and this experience inspired me to pursue a career in games.

TECHNICAL SKILLS

Languages	C/C++ (20+ Years), C# / .NET / Mono (12 Years), GLSL (6 Years), Objective C (2 years) Python (2 years)
Technologies	Unity3D (5 years), Unreal Engine (4 years) Windows API (10+ years), WinForms (10+ years), DirectX (4 years), OpenGL (6 years), Boost, C++20, QT, MFC, STL, COM
Software	Visual Studio (v6-2022), Android Studio, XCode, Perforce, SVN, Git

DEVELOPMENT EXPERIENCE (20 years)

The Multiplayer Group (Lead Software Engineer) [5 yrs] May 2021 – Current

I currently work as a contractor for Play By Play Studios developing a sports title soon to be released on Steam, Xbox and PS5. I lead a team developing the UI for the game using UE5. I also worked on a prototype we demoed at GDC to Nintendo for gearbox, a strategy vehicle combat game for Wargaming and some smaller games developed as part of a gamejam. I also had a short contract for Epic Games, managing a team spread all over the world across many timezones supporting Epic in some very important releases around UE5

The Multiplayer Group (Senior Tools Engineer) [1.5 yrs] Sep 2019 – Apr 2021

I worked as a contractor for Zenimax Online Studios on the tools and content pipelines for an unannounced next generation AAA online title. This involved using C++20 to build a toolset to support pre-production of the new title in a proprietary engine.

Lockwood Publishing (Senior Core Tech Developer) [3.5 yrs] Apr 2016 – Aug 2019

I worked for a studio known for developing the hugely successful MMO/Social Platform Avakin Life, released on Android, IOS and Gameroom. This has millions of monthly active players. My role was to develop extensions to Unity where the engine lacked optimal features or where features were missing entirely. In addition to this, I worked on fixing graphics issues and developing tools for the content pipelines. I also had a large part in migrating the game engine as the game evolved.

Inspired Gaming (Development Team Lead) [1 yr] Mar 2015 – Mar 2016

I led a team developing games for the UK, Northern Island, Greece and Columbia. In the UK this involved work with William Hill, LBO, Coral, Gala, PaddyPower and NMI, and abroad (involving travel) to GLI in The Netherlands. The games used a proprietary engine based on DirectX. The role included management of a team of five. I also completed development work on tools utilised in house by developers and by external test teams.

Serif (Senior Software Engineer) [3 yrs] Apr 2012 – Feb 2015

For three years I developed illustration and desktop publishing software for a well-known software house before my team was made redundant. This involved developing a mix of new features and supporting a large code base with libraries shared across Serif's product range, all developed in C++ (using Win32 & MFC). I worked on some of the main features for DrawPlusX6 and X8, including key frame animation and vector drawing.

Games Warehouse (Software Engineer) [4 yrs] Jun 2008 – May 2012

For four years I worked closely with artists to develop skill and amusement games using an house engine based on OpenGL and C++. I also was involved in development for the game engine. These games ran mainly on PCs across the UK and abroad. I was also the main developer responsible for porting games to run on a wide range of PC based hardware for a number of platforms and clients. This included one rendered in 3D with physics simulation using Newton Game Dynamics.

Bell Fruit Games (Software Engineer) [1.5 yrs] Sep 2006 - May 2008

This role involved developing the back-end for game programmers to use to interface with hardware. This system ran on thousands of games cabinets across the UK.

My work also involved supporting a COM interface and design and development of a new system using .NET.

McClellan Software Design (Junior Programmer) [1 yr] Aug 2005 - Sep 2006

I worked for just over a year at a small firm involved in customising Sage accounting software. The main project I was involved with was a multi-threaded package for order processing and weighbridge monitoring. Developed mainly in C++ with some C#.

BT Research (Mobility Software Developer - Placement) [1 yr] Nov 2003 - Oct 2004

I completed a work placement at BT's research laboratory in Ipswich. In this role I worked closely with designers on demos for mobiles and PDAs. Some of the research projects I presented to clients from Siemens and Vodafone.

QUALIFICATIONS

Course	Award
MRes - Computer Science (Nottingham Trent) 2013 Masters in Graphics Research	Distinction
BSc (Hons) Software Engineering (Nottingham Trent) 2001-2005	66% (2:1) with placement
Certified Scrum Master	
3 A-Levels, 9 GCSE's (Queen Elizabeth's Grammar, Alford, Lincs)	Maths C , Physics C , Design Technology B GCSE Grades A-C including Maths & English.

Selection of subjects on MRes			
3D Games Algorithms (OpenGL, GL Shader Language)	Dist	MFC Programming (Network Poker Game)	Distinction

For my master's thesis I developed a hardware accelerated real time simulation for depth-of-field with partial occlusion, achieving a distinction. I used OpenGL and my own engine.

Selection of subjects on BSc			
Image Processing	1st	3D Graphics & Maths	2:1
Cursive Script Recognition	1st	Human Computer Interaction	2:1
Design & Implementation (C++)	1st	Data Structures in C++	2:1
Advanced Software Design (Group Project, UML)	1st	Final Year Project (OCR, AI, C++ .NET)	1st

For my undergraduate thesis I developed software to automatically transcribe guitar tablature. I used image processing techniques and neural nets to extract tablature from images.

HOBBIES

Guitar - I am a keen guitarist.

Gaming - I enjoy playing multiplayer strategy games and RPG games. I am currently building one in my spare time. I also am a regular member of Ludorati a club for board gaming and gaming with a large group. Some of them designers and writers!

Snowboarding - I have a recreational pass and like to go with friends on holiday.
